**Subject:** Updated Fire Status for Press Conference

Team,

As we prepare for our upcoming press briefing, please provide a detailed update on the fire status at all scenes, with particular emphasis on the Sherwin Williams/Meth Lab site. Include current containment progress, challenges encountered (e.g., additional fuel sources, structural hazards), and any resource requests that have been made.

Thank you,

Jordan Blake

Public Information Officer – Fire Services

**Subject:** Re: Updated Fire Status for Press Conference

PIO,

Here's the current update on the fire situation:

- **Dry Cleaners:** Fire is fully contained; no further spread.
- **Subway Sandwich Shop:** Fire has been suppressed; minor damage sustained.
- **Sherwin Williams/Meth Lab:** The initial explosion was contained at the meth lab front; however, the fire is now spreading into two adjacent commercial buildings due to a high fuel load (including paper products and stored chemicals). We have deployed additional engines, aerial water drop units, and rescue teams to manage this. Regional support for increased water supply and manpower has been requested.

We will continue to monitor and update you as the situation evolves.

Regards,

FD Commander Martinez

**Subject:** Aerial Water Drop Operations Status

Team,

For the press briefing, please provide an update on our aerial water drop operations at the Sherwin Williams site. Specifically, detail the number of units deployed, frequency of drops, and the effectiveness of these measures in slowing the fire spread.

Thanks,  
Jordan Blake  
Public Information Officer – Fire Services

**Subject:** Re: Aerial Water Drop Operations Status

Jordan,

Our current status for aerial operations is as follows:

- **FD Truck 1:** Currently conducting water drops over the Sherwin Williams area; drops occur every 5–7 minutes.
- **FD Truck 2:** En route to provide additional support; expected to be operational within 5 minutes.
- Preliminary assessments indicate that the aerial drops are slowing the fire's progression, but the sheer volume of combustible materials in adjacent buildings is a significant challenge.

We will update you with any changes.

Regards,  
Operations Officer Daniels
